

Pruning and Training of Berry Crops, Kiwifruit, and Grapes

A Series of 5 Courses

A series of online pruning modules, developed by Dr. Bernadine Strik, Professor of Horticulture, is now being offered through Professional and Continuing Education at Oregon State University. The series is designed to provide small farmers and home gardeners with the information needed to prune and train berry crops common to North America, including table grapes, kiwifruit, raspberries, blackberries, and blueberries from establishment through maturity.

The series is offered as self-paced on demand modules available anytime online. The modules consist of narrated lectures with photos and videos. Each module consists of 4 – 8 lectures totaling 1.25 – 2.5 hours in length. Registration is available for single modules or for the series at a discounted price.
