## Pre-Harvest Intervals to Comply with the Maximum Residue Limits (MRLs) of Selected Export Markets for Twelve Fungicides Registered for Use in Blackberries for the 2020 Growing Season - February 29, 2020

### Key to colors used in charts:

- **RED** means that the product should not be used during this time either because of EPA label restrictions or due to a high risk of exceeding MRLs for a given market.
- **YELLOW** means that the product should be used with caution during this time given all the variables (e.g. tank mixes, application method and calibration, use of adjuvants, environmental conditions, and post-harvest handling) that can impact the time it takes for a residue to degrade in order to meet the MRL for a given market.
- **GREEN** means that the product is likely to be safe for use at this time with low risk of residue remaining at harvest that would exceed MRLs for a given market.

### Charts

- **Abound** (Azoxystrobin)
  - Intended Market: Time before harvest (days)
  - USA
  - Australia
  - Canada
  - China
  - Codex
  - EU
  - Hong Kong
  - Japan
  - Korea
  - Taiwan

- **Captan**
  - Intended Market: Time before harvest (days)
  - USA
  - Australia
  - Canada
  - China
  - Codex
  - EU
  - Hong Kong
  - Japan
  - Korea
  - Taiwan

- **Elevate** (Fenhexamid)
  - Intended Market: Time before harvest (days)
  - USA
  - Australia
  - Canada
  - China
  - Codex
  - EU
  - Hong Kong
  - Japan
  - Korea
  - Taiwan

- **Fontelis** (Penthiopyrad)
  - Intended Market: Time before harvest (days)
  - USA
  - Australia
  - Canada
  - China
  - Codex
  - EU
  - Hong Kong
  - Japan
  - Korea
  - Taiwan

- **Kenja** (Isofetamid)
  - Intended Market: Time before harvest (days)
  - USA
  - Australia
  - Canada
  - China
  - Codex
  - EU
  - Hong Kong
  - Japan
  - Korea
  - Taiwan

- **Luna Tranquility** (Fluopyram+Pyrimethanil)
  - Intended Market: Time before harvest (days)
  - USA
  - Australia
  - Canada
  - China
  - Codex
  - EU
  - Hong Kong
  - Japan
  - Korea
  - Taiwan

- **Pristine** (Boscalid+Pyraclostrobin)
  - Intended Market: Time before harvest (days)
  - USA
  - Australia
  - Canada
  - China
  - Codex
  - EU
  - Hong Kong
  - Japan
  - Korea
  - Taiwan

- **Prolivio** (Pyriofenone)
  - Intended Market: Time before harvest (days)
  - USA
  - Australia
  - Canada
  - China
  - Codex
  - EU
  - Hong Kong
  - Japan
  - Korea
  - Taiwan

- **Rally** (Myclobutanil)
  - Intended Market: Time before harvest (days)
  - USA
  - Australia
  - Canada
  - China
  - Codex
  - EU
  - Hong Kong
  - Japan
  - Korea
  - Taiwan

**Acknowledgements:** This work was made possible with funding by the Washington Red Raspberry Commission (WRRC), Oregon Raspberry and Blackberry Commission (ORBC), and USDA Technical Assistance for Specialty Crops (TASC). Field collaborators include: Joe DeFrancesco, Peter Sturman, and Gina Koskela (OSU NWREC); Beverly S. Gerdeman and G. Hollis Spitler (WSU Mount Vernon NWREC). Sample analysis and generation of these charts was done by Camille Holladay and Keith Crosby (Synergistic Pesticide Lab in Portland, OR).

**Purpose & Methods:** This tool was developed to aid blackberry growers in selecting materials to manage key pests close to harvest with a particular export market in mind. Selected markets have been included, some of which have more restricted maximum residue limits (MRLs) or tolerances than required by the US for particular materials. The MRLs used to develop this tool come from those published by www.bryantchristie.com as of February 29, 2020. Please check the database as MRLs are dynamic. The data used to determine whether a longer pre-harvest interval would be necessary for a given market and its published MRL are based on a single application made near the legal US max rate for each material tested in replicated trials conducted at one location each in Oregon and Washington over three years, unless otherwise noted. All samples were extracted by the QuEChERS method and analyzed by GC/MS/MS and LC/MS/MS.

**Disclaimer:** These charts are just a guide. The authors of this tool cannot guarantee that any of these MRLs have not changed since February 29, 2020; therefore, the user assumes all responsibility for its use subsequently. We also cannot guarantee that a material listed for use in Oregon or Washington is registered for use outside those states (pesticide registration status is determined by the US EPA and State Governments where 'special uses' are concerned). Users outside these states are cautioned to consult with their local extension service to determine what is allowable. We also make no guarantees that any of the products listed will be effective against a particular pest. Finally, given all of the variables that can affect degradation rates - in particular the use of adjuvants and tank mixes, environmental post-application conditions, and post-harvest handling - we cannot guarantee that if a product is used according to this tool it will not leave residues that exceed MRLs for the selected market.
